" SWIFT-A great First language to learn. "

Fast and Powerful

→ Objective C

→ C language

Modern

WWDC

Safe

Optionals

```
1 import UIKit
2
3 var greeting = "Hello, playground"
```

Library

Collection of files,  
programs, scripts,  
functions that  
can be used

Variable

name of variable

value of variable

Variable / Constant

Initialization

age = 10

Constant

# Rules

Constant and variable names can't contain whitespace characters, mathematical symbols, arrows, private-use Unicode scalar values, or line- and box-drawing characters. Nor can they begin with a number, although numbers may be included elsewhere within the name.

var name1 = "Aditya"

(my\_name) = "myName"

# Type Annotations

let      name: String = "Aditya"      }

var      age: Int = 10      }

            
Type Ann.

//

.

\* Print Statement

Swift is a type-safe language, which means the language helps you to be clear about the types of values your code can work with. If part of your code requires a String, type safety prevents you from passing it an Int by mistake.
